

ABSTRACT OF THE DISCLOSURE

A portable computer system includes one or more battery connectors, a portable base computer, and a portable user interface module. The base computer includes a wireless receiver, and a processor having a data input operatively connected to the receiver and a power input operatively connected to at least one of the connectors. The base computer also includes mass storage operatively connected to the processor, and a wireless transmitter operatively connected to the processor. The user interface module includes a wireless receiver and a two-dimensional display having a data input operatively connected to the receiver and a power input operatively connected to at least one of the connectors. The user interface device further includes a user interface device and a wireless transmitter operatively connected to the user interface device.
